

Rotem SuperGuard

The SuperGuard provides you maximum capability with minimal complexity in programming and controlling up to ten Piguard units.

features and benefits

- SuperGuard is the ultimate pig house controller. Equipped with an easy programming interface, it provides programmable outputs for all major features and a 4x20 character LCD that provides display feedback on the programming and device status. The coordinated cursor, positioning scrollbar, quick access to device, feature selection, and a large numeric keypad are all easily accessible on the SuperGuard.
- The SuperGuard communicates with up to ten Piguard units to access history, collect events and alarms for each Piguard and all relevant data up to 100 days.
- A complete remote communication is built-in with a real time graphics HMI. Included within the SuperGuard is an alarm center for all attached Piguard units. In addition, the user-friendly SuperGuard features a real time display with a clock, a data plug for quick program transfer, plus a multilingual support.
